Applications are being accepted for enrollment in Junior Kindergarten to Grade Three for the 1986-87 academic year.

OUR PHILOSOPHY OF EDUCATION

OUR PHILOSOPHY OF EDUCATION is founded upon a basic respect for the value and worth of each individual and the special contribution that every child makes to his community.

We are concerned with the development of each child as a whole and we therefore strive to achieve a balance of physical, emotional, social and intellectual growth.

We believe that all children are naturally curious and are highly motivated to learn. However, each child is unique. Children have different learning styles and progress at different rates. The school must draw upon and foster natural interest and curiosity when developing an educational program designed to match and meet each child's personal needs.

We believe that children acquire knowledge, understanding and thinking skills through activity, experience, discovery and discussion rather than memorization, duplication and lecture.

We believe that each individual is better able to reach his/her personal potential in an atmosphere of co-operation and sharing rather than in competition with others.

We believe that the school must work in partnership with parents in facilitating the growth of the child.

OUR GOALS FOR YOUR CHILD INCLUDE:

- A love of learning;
- Self understanding leading to self esteem;
- Social responsibility, co-operation and the ability to work both independently and as part of a group;
- The ability to acquire knowledge, organize it and apply it in new situations;
- Effective decision making and problem solving skills.

OUR PROGRAM:

Employs a multi-age group model in order:

- to ensure that learning experiences and materials suited to each child's current levels of development are readily available
- to foster co-operation and support
- to encourage children to learn from each other
- to highlight the individuality of each child;

Provides a rich stimulating environment and active participation in diverse learning experiences;

Provides a balance between creative experimentation and directed, purposeful activity, research and exploration;

Stresses the underlying cognitive processes involved in learning;

Challenges each child to attain high personal standards;

Meets the curriculum guidelines established by the Ontario Ministry of Education.
